EYE LEVEL EDUCATION

Many parents today are facing educational challenges – and looking for answers to help their children succeed academically. Whether the immediate goal is for early learning, remedial education, or academic challenge, Eye Level is the answer. More than two million K-12 students have benefited from Eye Level programs to develop Math and English proficiency and become self-directed, lifelong learners.

RECOGNITION

Eye Level English and Math programs are based on U.S. Department of Education curriculum standards. Our programs have been recognized by the NCTM (National Council of Teachers in Mathematics) and NCTE (National Council of Teachers in English).

INDIVIDUALIZED LEARNING

Eye Level Math and English programs work from the philosophy that successful learning takes place at the eye level — the perspective — of your child. By understanding learning needs and goals as your child sees them, our instructors are able to set appropriate goals and tailor a curriculum to attain them, one successful step at a time. Our Math and English programs also complement each other to encourage full integration of knowledge.

SELF-DIRECTED LEARNERS

Eye Level allows each child to become the key to his or her success. With the ongoing guidance of our instructors, each student will set attainable goals and learn at a pace agreed by the student, parents and instructor. Self-directed learners develop confidence in and cognition of their skills, as well as a passion for and personal responsibility to lifelong learning.

THE ENGLISH PROGRAM

The English Curriculum

Eye Level's curriculum takes students from the basic motor skills needed for reading and writing, through the building blocks of grammar, to the more complex concepts that allow the mastery of verbal and written communication.

Eye Level English is based on U.S. Department of Education curriculum standards for English Language Arts. The program guides students in the mastery of English language proficiency through thematic approaches, repetitive practice, and strategies that combine listening, speaking, reading and writing.
